

COPELAND ROYALL

copeland@copey.dev

copey.dev

SKILLS

Languages Python, TypeScript, Go

Software AWS, Terraform, Terragrunt, Pulumi, Ansible, GitHub Actions, Docker, Kubernetes, Git

EXPERIENCE

Freelance Software Engineer

January 2025 – present

Architected and built pharmaceutical research AWS environment using Terraform and Terragrunt.

Opinion Health

- Multi-region account-isolated RDS Aurora for data residency of healthcare data
- Dedicated log archive account for org Cloudtrail and region-matched pgAudit database logs exported via Lambda with industry-compliant 6 year retention
- GitOps using GitHub Actions CI/CD pipeline with Terraform module unit testing and security/secret checks, utilized in PR review workflow and drift detection
- Delegated-account administration of org-wide threat detection (GuardDuty) and guardrails (SCPs for region locking, encryption, KMS)
- Python pipeline for extreme multi-label classification (1.4k labels) on 130k patient records from 10 years using traditional NLP techniques, Bedrock embeddings and batch LLM inference; users anonymized until database ingest to reduce exposure risk
- SSO+MFA IAM database access from Ansible-controlled VMs
- Lambda for preemptive cold start of Aurora database to ensure initial queries don't timeout

Keygraph

- Developed multi-account, -region and -environment AWS platform module in TypeScript/Node.js Pulumi IaC

Historical Artist Website

- Built website for acclaimed 20th-century San Francisco artist with Hugo, Cloudflare Worker and R2 deployment; Javascript OAuth proxy for client editing

Visa Software Engineer

September 2023 – May 2024

Accelerated EU payment product rollouts on GCP with TypeScript IaC and led deployment of cost monitoring in org.

- Implemented TypeScript Pulumi IaC package to repeatably deploy 256 resources across 4 GCP projects, meeting Payment Card Industry compliance, reducing deployment time and automating manual steps; also wrote packages for managing GKE, IAM and KMS resources; all with comprehensive TypeScript unit testing
- Led team initiative to deploy FinOps in 45 test and production projects; calculated 10% cost savings
- Installed and updated Kubernetes cluster addons using Argo CD, Kustomize and Helm
- Migrated Concourse CI pipelines to new load-test platform

Visa DevOps Engineering Intern

Summer 2022

Created foundational AWS Terraform modules and development processes.

- Developed Terraform modules for AWS RDS Aurora and ElastiCache Redis for standardized multi-team use, including best practice configuration for enforced quality

Tangible AI Natural Language Processing Intern

Summer 2021

Contributed Python ML-driven positivity-ranking news reader feature to open-source chatbot.

EDUCATION

University of Edinburgh BSc Computer Science, First-class honors (Disseration)

2019 – 2023

PROJECTS

- Home Kubernetes cluster deployed with Flux CD, Prometheus/Grafana, SOPS secrets, cert-manager, Ubuntu
- Built first 3D aircraft flight heatmap and radar viewer to see paths curving with the globe (instead of distorted 2D)
- Empowered Siri with local aircraft tracking, achieving over 18,500 downloads from public image repository

INTERESTS

Long-distance cycling, aviation, FPV drones
